

HidroMix — The Original Solution for Tank Mixing and Digester Systems

The HidroMix system typifies the Hidrosta approach towards True Life Cost.

Namely best overall savings achieved through the supply of highly efficient systems offering simplicity, reliability & longevity.

High efficiency TEFC, true IE3 motors, which unlike dry well submersibles qualify for Enhanced Capital Allowance.

- Nozzles tailored to each design keep pumps running close to their best efficiency point helping to ensure the highest wire to water efficiencies of up to 75% probably the highest for any pump mixer system.
- Most efficient transfer of energy to fluid through short delivery pipe.
- Large nozzles and unique pump non clog hydraulic designs ensure free flowing systems, avoiding the need to use a less efficient and more costly to maintain chopper/ macerator pump.
- No tank entry requirements for installation or maintenance. Presenting the lowest health and safety risk for a mixer system.
- Longevity and reliability is proven on over 300 UK sites.
